### **DETAILED ACTION**

1. This action is responsive to communications: Appeal Brief filed 8/11/03 of application filed on 01/10/00 which is a continuation of the application 08/892,842 filed on 7/11/97, now US Pat No. 6,178,433 B1.
2. Claims 7-12, 27-31 are pending in the case. Claims 7, 11 and 27 are the independent claims.
3. The rejections of claims 7-12, 27-31 under 35 U.S.C. 103(a) as being unpatentable over Brown in view of Benedikt have been withdrawn in view of Applicants' arguments.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 7-12, 27-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Levine et al. (US Pat No. 6,405,221 B1, 6/11/02, filed 10/20/95).

Art Unit: 2178

Regarding independent claim 7, Levine discloses:

- defining the first variable equal to the first information and the second variable equal to the second information (figure 14, #100 and col 8, lines 25-61: defining parameters for the categories such as Page Length, Graphics, etc... which are considered equivalent to defining variables for each category Page Length, Graphics, etc...where the Page Length and Graphics are the different information portions included in the single web page as seen in figures 4 and 5)
- defining, in a second portion of the file, the first and second presentation layout, wherein said first presentation layout include said first variable and said second presentation layout includes said second variable (col 9, lines 13-22: "*a second portion of the computer readable code creates a window on the display screen having the capability of receiving a variable but requested grouping of data therein*"; figure 14, #100 and col 8, lines 25-61: defining parameters for the categories such as Page Length, Graphics, etc... which are considered equivalent to defining variables for each category Page Length, Graphics, etc...where the Page Length and Graphics are the different information portions included in the single web page; the fact that the window has the capability of receiving a variable of requested data to be displayed thereon where the requested data are the given categories with associated parameters shows that Levine defines the presentation layouts corresponding with the associated parameters or variables)

Art Unit: 2178

- generating a page of presentation material in response to a request for an information, wherein the page is generated based on the first information layout and includes the first information and does not contain the second information (abstract; figure 5 and col 4, line 47 to col 5, line 33: upon selecting the topic "Links", the page is generated based on the selected information layout and includes the information of "Links" and does not contain information of other topics such as Page Length, Graphics, etc...; figure 7, #40a, #40b, #40c and col 6, lines 35-47: upon selecting a topic such as A, B, or C, only the A information, the B information, or the C information is displayed respectively)

Levine does not explicitly disclose that "defining the first variable equal to the first information and the second variable equal to the second information" should be in the first portion of the file. However, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to have modified Levine to include said defining in the first portion of the file since Levine does teach defining variables for the corresponding information, which means said defining is already included in the file, thus motivating of moving the defining part to the first portion of the file.

Regarding claims 8 and 10, which are dependent on claim 7, Levine discloses that said page is World Web page for displaying on the web browser and the request, which is actually a hyperlink, includes a uniform resource locator URL (col 2, lines 10-43; figure 5: the request "Links" is a hyperlink).

Art Unit: 2178

Regarding claim 9, which are dependent on claim 7, Levine discloses that the web browser does not support a hypertext markup language frame tag (figures 4-5)

Claims 11-12 are for a system of method claims 7-10, and are rejected under the same rationale.

Claims 27-31 are for a system of method claims 7-10, and are rejected under the same rationale.

### ***Response to Arguments***

6. Applicant's arguments with respect to claims 7-10, 27-31 have been considered but are moot in view of the new ground(s) of rejection.

Applicants argue that Brown and Benedikt do not disclose the claimed limitations specially "generating a page of presentation material in response to a request for said first information, wherein the page is generated based on the first presentation layout and includes said first information and does not contain said second information."

Examiner agrees.

Levine discloses and suggests the claimed limitations. See the claim rejections above.

**Conclusion**

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
